

Claims 1-2 (canceled)

3. (Currently amended) A flexible connector comprising:

a length of corrugated tubing having a distal end;

an end piece having a proximal end;

a length of polymeric tubing surrounding the distal end of length of corrugated tubing and the proximal end piece for initially retaining the proximal end of the end piece in engagement with the distal end of the length of corrugated tubing;

a sleeve surrounding the length of polymeric tubing, the proximal end of the end piece, and the distal end of the length of corrugated tubing for permanently retaining the proximal end of the end piece in engagement with the distal end of the length of corrugated tubing;

wherein the end piece further comprises a plurality of corrugations comprising the proximal end thereof; and

~~The flexible connector according to claim 2 wherein the length of polymeric tubing engages engaging the corrugations of the end piece and the corrugations comprising the distal end of the length of corrugated tubing to retain the proximal end of the end piece in engagement with the distal end of the length of corrugated tubing.~~

4. (original) The flexible connector according to claim 3 wherein the length of polymeric tubing resiliently engages the proximal end of the end piece and the distal end of the length of corrugated tubing.

5. (original) The flexible connector according to claim 3 wherein the length of polymeric tubing is heat shrunk into engagement with the proximal end of the end piece and the distal end of the length of corrugated tubing.

Claims 6-8 (canceled)

9. (currently amended) A flexible connector comprising:  
a length of corrugated tubing having a distal end;  
an end piece having a proximal end;  
a length of polymeric tubing surrounding the distal end of length of corrugated tubing  
and the proximal end piece for initially retaining the proximal end of the end piece in engagement  
with the distal end of the length of corrugated tubing;  
a sleeve surrounding the length of polymeric tubing, the proximal end of the end  
piece, and the distal end of the length of corrugated tubing for permanently retaining the proximal  
end of the end piece in engagement with the distal end of the length of corrugated tubing;  
a length of mesh tubing surrounding the length of corrugated tubing, the length of  
polymeric tubing, and the proximal end of the end piece;  
the end piece further comprises a plurality of corrugations comprising the proximal  
end thereof;

~~The flexible connector according to claim 8 wherein the length of polymeric tubing~~  
engages engaging the corrugations of the end piece and the corrugations comprising the distal end

of the length of corrugated tubing to retain the proximal end of the end piece in engagement with the distal end of the length of corrugated tubing.

10. (original) The flexible connector according to claim 9 wherein the length of polymeric tubing resiliently engages the proximal end of the end piece and the distal end of the length of corrugated tubing.

11. (original) The flexible connector according to claim 9 wherein the length of polymeric tubing is heat shrunk into engagement with the proximal end of the end piece and the distal end of the length of corrugated tubing.

Claim 12 (canceled)
